#### Hannah's top 9 list

1. More control of contact panel: use more less information without leaving empty boxes
2. \*We've had some issues editing text in the center areas of Freeform pages. For example, once you turn text into a Subheader, you can't turn it back into normal paragraph style unless you manually change it in the html panel. We also ran into issues trying to change the color of the text. After highlighting all the text and changing the color, only certain words and sentences were actually changed. Again, I had to manually change the color in the html panel. Any ideas on what's going on with that?

**(text changing from a subheader to a regular format it will not change0**

**(changing colors in editor is not completely working)**

3. (TEXTWRAP) \*We added quite a bit of text to the "Mayor's Message" on our homepage. Is there a way to add a text wrap to this so it doesn't look like there's not so much space above our mayor's head? <http://cms6.revize.com/revize/bardstownky/>
4. \*Nahom, our systems engineer, originally wanted to host the site ourselves but now is hoping that we can go ahead and launch the site on your servers and then transition to hosting ourselves within a year. Just wanted to give a heads up on this, and make sure we wouldn't run into any issues down the road. **(I think Ednan addressed this one???)**
5. On our top navigation, there are menu category headings in yellow and the subcategories are in white. **All of the yellow headings are currently linked to pages, but we would like to be able to make some of them just text with no link. Do you know how this can be accomplished?**
6. Our **calendar events (spacing?)** end up taking up the same amount of horizontal space on our homepage regardless of the length of the event title?
7. On our homepage we have a list of icons representing our departments - the first department "**Administration**" when hovered over cuts off the first part of the name.
8. FAQ pages aren't responsive (**Devin fixed**)
9. Search bar at the bottom of our pages is working as expected
10. "CITY COUNSEL" not the right size, she would like the spaces set the same at all time
11. The 6 boxes are not tightly aligned,
12. Ednan or someone needs to enable <http://support.revize.com/issues/26418>
13. Box for extensions for directory, can only do 10 digits at this time

She wanted to know if the “yellow” pages had to have a page or could they be words...no pages.
